## Web Development Skills

### Front-end:

- HTML5
- CSS3 + SASS
- JavaScript
- React.js

### Back-end:

- MongoDB + Mongoose
- Node.js + Express

### Dev-ops:

- Git
- GitHub
- Heroku

## About me

I am a rationalist with a love for technology, people, and adventure. I see myself as a piece of clay, capable of adapting to any environment. I believe that adaptation is one of the defining features of humanity.

In the workplace, I always try to find ways to improve. Innovation generally leads to increased efficiency, which is always a good thing.

My desire to grow, improve, and ultimately excel is what makes me an asset to the work environment. I am a fast learner, with an unquenchable thirst for knowledge.

## Web Projects

### Student Management Platform

Stack: MERN

[View app](#)

- A single page, responsive platform that allows teachers to create classes, assign students to them, and track student performance.

## Work Experience

### English Teacher

2019 – Present

PoPoDoo English Center

Hanoi, Vietnam

- Collaborate with fellow teachers
- Develop and execute lesson plans for various classes

## Education

### Self-taught:

I taught myself to code using HTML and CSS in 2018. Since then, I have been making static websites for small projects and friends.

In August 2020, I started delving deeper into coding by learning and practicing JavaScript, React.js and Node.js.

Initially, I relied on Freecodecamp.org and YouTube videos for guidance, but started learning by applying principles, debugging and researching concepts as time progressed.
